

## celexon Ultramobil Professional Plus Screen

### DESCRIPTION:

The celexon Ultramobil Professional Plus Screen series offers a high-quality and particularly convenient solution for mobile projection applications in professional environments. Whether for business presentations, educational use, or demanding home cinema applications, this mobile screen impresses with its high-quality workmanship, ease of use, and outstanding image reproduction.

The high-quality 3-layer PVC screen fabric with an integrated woven core ensures excellent flatness and uniform projection results. The matt white diffusion surface with a gain factor of 1.2 enables high-contrast images with natural colour reproduction and a wide viewing angle. Black side borders and the black, opaque backing further enhance the perceived contrast and prevent unwanted light penetration from behind.

For high stability and a long service life, the screen is equipped with an integrated scissor-joint system featuring high-quality gas pressure springs. This allows the screen to be set up quickly, safely, and conveniently with just a few simple steps and stored away just as easily after use. The sturdy feet ensure secure positioning during operation.

The robust aluminium case reliably protects the screen during transport and makes it the ideal solution for daily mobile use. The screen is supplied fully pre-assembled and is ready for immediate use – no additional assembly is required.

### KEY INFORMATION:

- Sturdy scissor-joint system with gas pressure spring
- Black, opaque backing
- Gain factor of 1.2 – ideal for home cinema applications and presentations
- Long service life and convenient operation
- Robust aluminium case for mobile use
- Quick setup and dismantling with just a few simple steps
- No additional assembly required
